# Your guide to damp and mould

Damp and mould in the home can be a health hazard, causing respiratory problems and making allergies worse.

Making sure your home is free of mould and damp is not only important for your health, but it is also your responsibility as a tenant.

Preventing damp and mould is much easier than you might think.

This quick guide explains how some everyday habits contribute to damp indoors and offers simple solutions to minimise and deal with small damp and mould issues.

# How to prevent damp and mould

## Air your property regularly

Open windows regularly to make sure your property is well-ventilated. Even when it's cold, moisture can gather in the home. Opening the window allows some of this moisture to escape.

## Keep doors closed

Keep bathroom or kitchen doors closed when having a shower or bath, or when cooking. This will prevent moisture from spreading to other parts of the property.

## Wipe away condensation

Cleaning the condensation from windows and frames every day will minimise the spread of black mould. You can use a rag or towel to wipe away condensation.

## Turn your heating on

Running your heating can avoid cold spots, dry out damp, and reduce your chances of getting mould.

## Keep an eye out for leaks

Leaky window frames, pipework, walls and doors are common sources of moisture. If you see a leak, you should report it to us as soon as possible so we can deal with the problem swiftly. This will also stop the issue from turning into more serious problems and cause further damage to the property. In the meantime, use a bucket or bowl to collect any drips and make sure to keep surfaces dry with a mop or towel.

## Dry clothes in a ventilated room

Don't dry clothes on radiators. The water evaporates and turns into moisture in the air and is then circulated around the rooms. This then gathers on walls, windows and other fabrics in the home and can be a mould risk. Instead, dry clothes on a clothes airer in a bathroom. Open a window, use the extractor fan or use a dehumidifier to reduce the spread of moisture indoors.

## Dehumidifiers and damp traps

Using a dehumidifier is a great way to take the moisture out of the air, especially if you dry your clothes indoors. You can buy an inexpensive one from a local hardware store or online.

Disposable damp traps can be cheaper, but over time, you might find it cheaper (and environmentally friendly!) to use an electric dehumidifier.

## Use extractor fans

If you have an extractor fan in the bathroom, always make sure it is running when you're having a shower or bath. If you have an extractor fan in the kitchen, you should also use it to disperse moisture and cooking smells.

If you don't have an extractor fan, open a window when you cook to allow the moisture to escape.

### Don't overfill your home

Avoid pushing furniture against the wall, or overstuffing wardrobes as this can cause damp and mould to grow and spread. Check behind furniture regularly for signs of damp or mould developing.

### Grow moisture absorbing plants

Some plants can absorb moisture and pollution from the air and are a great addition to your damp prevention arsenal. Peace lilies, tillandsia, palms and ferns are all moisture absorbers — some ferns actually thrive in damper rooms such as kitchens and bathrooms, just make sure you also give them some indirect sunlight.

# How to clean damp and mould spots

Damp commonly occurs in the bathroom, on exterior facing walls and around window and door frames. Keep an eye on these problem areas and clean the moisture and damp regularly to minimise your chances of getting black mould or mildew.

If you do see mildew or mould forming, be sure to use gloves and a face mask before cleaning. Ventilate the room well when cleaning mould spots. When working with chemicals, you must always follow manufacturers' instructions. Dispose of any rags that you have used to clean mould after using.

Most black mould spots can simply be wiped off with a damp cloth. Be sure to dry the affected area after and leave the room to ventilate.

If there is a more ingrained mould problem, such as in a bathroom or exterior wall, follow these steps:

Use a mould treatment spray, these are widely available in supermarkets.

Use a stiff bristle brush to scrub the area.

Clean off the area then dry it, then leave a window or door open to ventilate.

## Report any issues to us.

If you need more advice on mould or condensation, please let us know. We can arrange a Technical Inspector to visit you.

Please report any repairs to us, taking care to include as much information as possible.

Our Contractor will then contact you to arrange a suitable time to complete the repair.
